

Packaging For Seafood

Food Manufacturing Staff

Cryovac Darfresh® 10K and CryovacLID1050S are two packaging options meeting FDA oxygen permeability requirements for fresh and frozen seafood. These products offer solutions for case-ready seafood options. The Darfresh 10K package is a three-dimensional package with a second skin appearance, showcasing the product for an attractive look appealing to consumers. The LID1050S lidding film is highly breathable due to a proprietary process for microperforation of the lidstock. The multilayer film achieves oxygen transfer rate (OTR) at or above the FDA mandated 10,000 OTR for fresh seafood.
