

Pedestrian-Operated Cart

Food Manufacturing Staff

The MFC-100 pedestrian-operated, battery-powered cart features a lifting crane option. One person can safely lift, transport and maneuver loads up to 750 lbs. The cart is easy to operate and features include:

- Butterfly speed control
- Emergency kill switch
- Keyed power switch
- Pneumatic drive tire
- Hydraulic lift cylinder with a 17" stroke and hydraulic drive wheel

The lifting crane is one of six optional attachments, which include a ball hitch, fifth wheel king pin receiver for trailers, tow straps for automotive towing, bus/truck frames custom attachment, and adjustable lift attachment for lifting and moving rolls of materials. Because the cart runs on batteries, it does not emit any harmful exhaust or fumes. It is significantly less expensive than a forklift, and operators do not need a license. It comes with a battery charger that plugs into a standard outlet.
