Pipette Tips

Food Manufacturing Staff

Rainin BioClean™ pipette tips are 100% inert and help ensure safer ingredients, critical to product safety and consistency. This helps reduce costs associated with reworked batches and unhappy customers, as well as helps ensure compliance with increasingly stringent food manufacturing guidelines worldwide. These tips have been proven to be free of both the detergent DiHEMDA and releasing agent oleamide. The products are produced and packaged in a 100,000k clean room environment via a fully automated process, ensuring they are free from external contaminants such as DNA, DNase, RNase, ATP, Pyrogens and PCR Inhibitors.
