## 'Skinpack' Foil Tray

Food Manufacturing Staff

The 'skinpack' foil tray combines the convenience of an oven or grill tray with the superior extended shelf life of vacuum packaging. The SKINFoil tray features a film that seals to all surfaces of the tray — rim, sidewalls and base — thereby tightly covering the contents. It can be used with Company's range of smoothwall foil trays from 1.2" to 3.4" in depth, and is suitable for a variety of food products including ready-to-cook meats, poultry, pork, seafood and sausage.
