

Flat Wire Conveyor Belting

Food Manufacturing Staff

The newest flat wire conveyor belting design is ready to handle any type of fabrication process in the manufacturing industry. Company has evolved standard PacTite metal conveyor belts by adding the ability to specify variable patterns of the belt pickets, resulting in PacTitan, a belt with more options and a longer lifecycle. Improved belt construction results in a belt with reduced weight, which can be manufactured specifically to match particular applications. Custom options allow Company to better match the variable constructions of the belt to product requirements and customer needs.
