

IPPE Coverage: Even Chill System, Booth #4959

Food Manufacturing Staff

The ColdFront™ even chill system automatically chills bulk product. The system was designed specifically to resolve the issue of inconsistent product temperatures when packing large volumes of product in bulk bins. With the push of a button, the system supplies quick, precise and controlled delivery of carbon dioxide snow. The proprietary PLC control system can be adjusted to provide the optimum CO2 ratio, providing flexibility to chill a wide variety of poultry, seafood and meat products. By delivering the precise amount of cooling power needed and evenly distributing it throughout the product in the container, the system improves overall product quality.
